Crypto Market.

In recent years, cryptocurrencies have established themselves on the market while experiencing tremendous growth. On average, we could observe a significant increase each year.

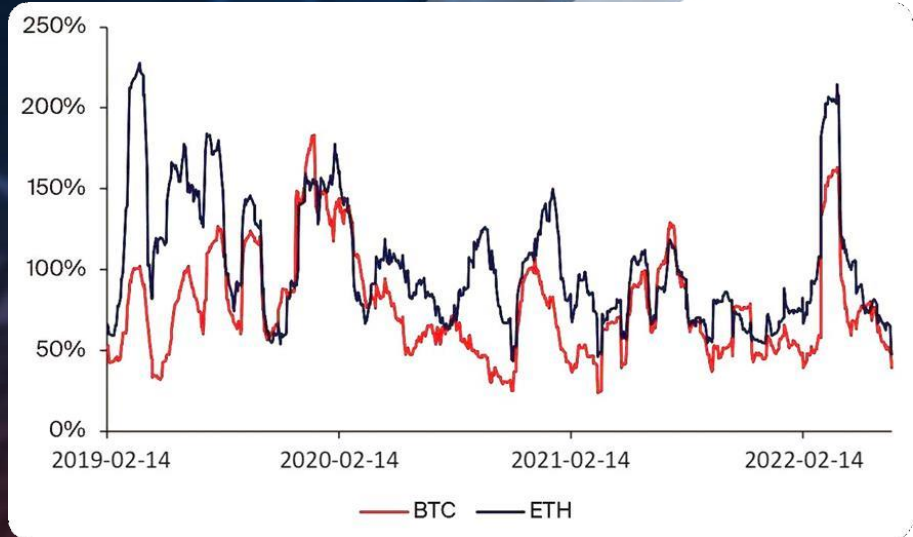

According to studies, this establishment will continue to grow over the next few years. By 2025, total capitalization is expected to grow tenfold.

Market Volatility.

The crypto market is one of the most volatile markets with fluctuations of up to 100% in short periods of time. This means that appropriate risk management becomes a challenge.

With a proper strategy and considering and eliminating all risks, however, this increased volatility can prove to be very profitable and offers many opportunities.

About Futures Bulls.

Our expert employees perform at their best each and every day to help you achieve your financial goals.

Security is our top priority, which is why we work with diversified portfolios that are managed exclusively with our latest and proven strategies

Key Competencies

Our Vision.

Visionaries see what others may believe.

Our vision is clear and unambiguous. Futures Bulls will become one of the first reliable investment communities that will simplify this highly complex market and let everyone benefit from its potential. Our main goal is to create a community that benefits from the different aspects of the crypto market.

Our entire community will benefit from unique opportunities and we will have a significant impact on the crypto market with our upcoming projects.

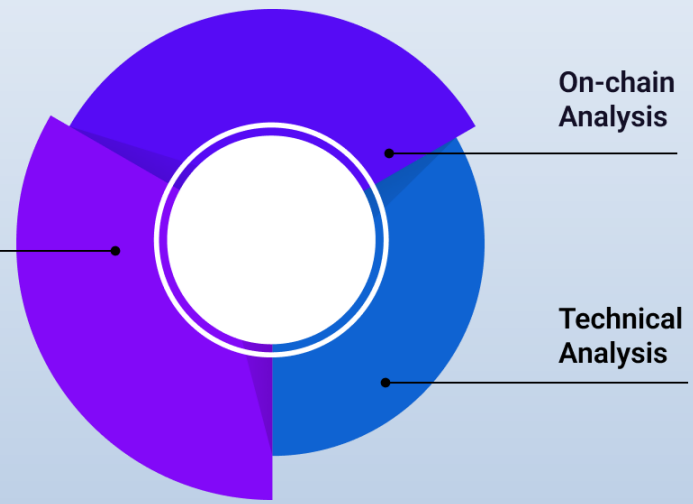

How we generate profit.

To secure the investments of our clients, we work with a strategy based on diversification and focused on profitability.

Trading decisions are made based on our three-point analysis.

Order Flow Analysis

On-chain Analysis

Technical Analysis

Technical analysis.

- Technical chart analysis is based on recurring trend patterns.
- Historical data can be used to determine the probability of such patterns repeating.
- For us, technical analysis is part of the decision-making basis for a possible trade.

On-Chain Analysis.

- Bitcoin is the number 1 cryptocurrency and altcoins move in correlation to bitcoin. All transactions can be viewed transparently on the blockchain.
- Transaction behavior can be processed and visualized with the help of on-chain indicators. Since these data are based on facts and events and not only on probabilities, valuable information can be gained and used for trading.

Orderflow Analysis.

We mainly use orderflow trading to manage portfolios.

Orderflow trading is based on market data and is used by institutions and professional trading firms. It is considered one of the most sophisticated but reliable strategies and basically a deep analysis of supply and demand.

While most traders in the crypto market rely on technical analysis only, the analysis of order books and order flow can be a decisive advantage.

Risk Warning- Trading foreign exchange on margin carries a high level of risk, and may not be suitable for all investors. Before deciding to trade foreign exchange, you should carefully consider your investment objectives, level of experience, and risk appetite. There is a possibility that you may sustain a loss of some or all of your investment and therefore you should not invest money that you cannot afford to lose. You should be aware of all the risks associated with foreign exchange trading, and seek advice from an independent financial advisor if you have any doubts.
